

# Security risk assessment report

## Part 1: Select up to three hardening tools and methods to implement

1. Password Policies
2. Firewall Maintenance / Implementation
3. Server and Data Storage Backups

## Part 2: Explain your recommendations

The use of password policies to counteract the sharing of passwords between employees and the bad configuration of the admin role.

A basic firewall implementation / maintenance as it lack any form of prevention of potential threats.

A server and Data storage backups as it is commonly use in most systems with a data storage in place, to prevent losing all the company data on an attack or environmental disaster.
